#### (U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

TADIRCM is a Tactical Aircraft Directed InfraRed Countermeasure system. TADIRCM provides the warfighter with protection against surface and air to air missiles. This project looks at the infrared (IR) MANPAD & surface to air (SAM) threat. FY 2005 Congressional language provided funding for the completion of the Early Operational Assessment (EOA) project into flight test. The completion is scheduled for 2006.

Strike Directed Infrared Countermeasure System Development and Demonstration (Strike DIRCM SDD) designed for fixed wing aircraft is an anticipated ACAT II program, which anticipates receiving a MS B decision in First Quarter FY 2007. The Strike DIRCM SDD will leverage information gained during the EOA to develop and field a DIRCM system for Naval assault aircraft by 2013. Strike DIRCM is needed for protection against Surface to Air and Air-to-Air IR threats. Strike DIRCM regains airspace below 20K feet. DIRCM neutralizes the IR threat.

Assault DIRCM is anticipated to IOC in 1st quarter FY 2014. Assault DIRCM is an advanced capability against the IR SAM threat. Recent losses to assault aircraft, as a result of IR SAMs, require an advanced DIRCM solution.

CH-53 Directed InfraRed Countermeasures (DIRCM) Technology Assessment Program (TAP) is a FY 2005 Supplemental Add. The funding will be used for the test of all applicable USSOCOM MH-53 DIRCM system capable hardware and software, hardware-in-the-loop countermeasure effectiveness modeling and simulation, the integration and installation of a flight testing, a complete de-modification of the aircraft will be performed to return it to a serviceable condition.

Accomplishments / Effort / Sub-total Cost	6.994	*			

The objective of this Tactical Aircraft Directed InfraRed Countermeasure (TADIRCM) Initial Suitability project is to take science and technology components and configure into an airborne pod and perform limited effectiveness testing. The output will be test articles consisting of a 2-color missile warning sensor or sensors to detect and declare the threat; an off-the-shelf Advanced Technology Demonstration laser coupled to a new miniature pointer/tracker which takes the declared threat from the missile warning and passes to a fine track sensor in the pointer/tracker, subsequently slewing and applying laser energy to counter the threat. All this will be contained within a newly designed wing-mounted pod. FY 2005 accomplishments include the POD design and build, the delivery of 2 missile warning sensors, design and build of the system processor, and design and build of pointer/trackers by two separate contractors.

	FY 2005	FY 2006	FY 2007	
Accomplishments / Effort / Sub-total Cost		9.807	20.527	
RDT&E Articles Qty				

FY06 continues efforts begun with the design and build of a podded DIRCM system, (incorporating missile warning sensors, system processor and pointer/tracker), and flight test the pod to provide an assessment of the advanced technology in simulated flight conditions. Information gained during this Early Operational Assessment (EOA) will be leveraged to develop and field a DIRCM system for Strike aircraft by 2013, and Assault aircraft by 2014.

In conjunction with the flight testing of the DIRCM pod, intensive pre-SDD efforts begin in FY 2006 including but not limited to: Analysis of Alternatives (AOA) for Strike and Assault DIRCM, pre-SDD contracting actions, initiation of program documentation to support milestone B decision in FY 2007, and development of applicable modeling and simulation models beginning in FY 2007.

Strike Directed Infrared Countermeasure System Development and Demonstration (Strike DIRCM SDD) designed for fixed wing aircraft is an anticipated ACAT II program, which anticipates receiving a MS B decision in First Quarter FY 2007 and an SDD contract award in 3rd Quarter FY 2007. Strike DIRCM is needed for protection against Surface-to-Air and Air-to-Air IR threats. Strike DIRCM regains airspace below 20K feet. Assault DIRCM is an advanced capability against the IR SAM threat. Recent losses to assault aircraft, as a result of IR SAMs, require an advanced DIRCM solution.

#### Schedule:

Schedule has changed as a result of technical issues with the Army's Suite of Integrated Infra-Red Countermeasures (SIIRCM) system and delays in contract deliveries.

#### Technical:

In June 2005, it was determined that the Army's Advanced Technology Infrared Countermeasure (ATIRCM) was not meeting all of it's performance requirements within the curent schedule, resulting in a program deviation report. In December 2005, the Army revised their ATIRCM acquisition strategy which delayed future ATIRCM spirals until 2010.
